Saxitoxin / PSP ELISA Test Kit

Retail Price - \$449

Minimum Bid - \$100

SeaTox Research Inc's Saxitoxin / PSP Enzyme-linked Immunosorbent Assay (ELISA) detects Paralytic Shellfish Poisoning toxins in a variety of samples. PSP toxins contaminate shellfish worldwide and have debilitating effects on human health when consumed. Our antibody binds saxitoxin and neo-saxitoxin with approximately equivalent affinity, and it can also detect GTX 1/4 and GTX 2/3 with an additional conversion step. As such, our ELISA is able to detect the most toxic versions of PSP toxins with limited cross-reactivity with nontoxic versions.
